

Supertent

Disposable Decontamination Tents

The Supertent is a disposable tent system suitable for use as a multi-stage airlock and is ideally suited for the asbestos removal industry. The Supertent can be simply and quickly constructed, with the metal tent poles being easily attached to the disposable tent skins via pre-cut sections.

As the Supertent poles remain outside of the tent skin, they do not become contaminated during works and can be used again.

Key features include:

- Quick & easy set up - offering a quicker alternative to traditional timber and polythene set ups
- Range of sizes available to suit various projects
- Tough and robust once assembled
- Reduce site waste as all tent frames are reusable, with the tent skins taking up less space in an asbestos skip compared to timber
- Additional items include 3 x 4-part Asbestos Warning signs, 'Dirty End' & 'Clean End' labels, coverall hangers for use inside the tent
- Pre-cut D-Door with double zip for easy access/exit
- Internal weighted flaps
- Built in flange to allow the Supertent to be easily taped to enclosure

Easily attached to enclosure
